TECHNICAL SKILLS

Languages: Java, Python, C, C++, JavaScript, SQL.

Web: HTML, CSS, JavaScript, Thymeleaf.

Salesforce: Apex, Lightning Web Components (LWC), SOQL, SOSL, Flows, Declarative Automation.

Frameworks: Spring Boot, Spring Security, Spring Data JPA.

Libraries & APIs: OpenCV, MediaPipe, WebRTC, Web Audio API, OpenAI API.

Core CS: Data Structures & Algorithms, Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks.

EDUCATION

Banasthali Vidyapith

Rajasthan, India

Bachelors of Technology (Computer Science)

2021 - 2025

WORK EXPERIENCE

Technical Transformation Analyst - II

Deloitte USI

September 2025 - Present

- Engineered **25+ Salesforce components** using Apex, Lightning Web Components (LWC), and declarative automation, reducing manual processing by **65%** across client workflows.
- Enhanced a finance-sector client's Anti-Money Laundering (AML) platform, improving transaction monitoring and regulatory compliance through targeted system enhancements.

Project Intern

IET, ATC of CDAC ACTS, Pune

July 2024 - December 2024

- Engineered AI-based web scraping and text-mining tools, boosting data extraction efficiency across **3+** target sources.
- Contributed to research on “**AI-Based Web Scraping and Text Mining**” advancing methods for automated data collection and analysis.

PROJECTS

• **RiMorse – Morse Code Learning Platform**

[GitHub](#) | [Live Demo](#)

Tech: Vanilla JavaScript, HTML5, and the Web Audio API.

- A three-mode Morse code trainer (Learn, Play, Quiz) covering all **36** alphanumeric characters, with real-time audio synthesis and bidirectional text-to-Morse conversion.
- Implemented precise **1:3:7** dot/dash/gap timing ratios for authentic playback and kept the app fully self-contained across **3** files with zero build steps, cutting setup time to under **10 seconds**.

• **Breath Mirror – Gesture-Driven Interactive Art Installation**

[GitHub](#) | [Live Demo](#)

Tech: JavaScript, HTML5 Canvas, MediaPipe Hands, WebRTC, and the Web Audio API.

- A browser-based interactive art installation that turns a webcam into a gesture- and breath-controlled fogged mirror.
- Replaced conventional click/touch input with touchless breath and gesture control (pinch-to-erase, dual-hand capture), achieving **100%** client-side execution with zero backend dependency.

• **TickTask – Secure Multi-User Task Management Platform**

[GitHub](#) | [Live Demo](#)

Tech: Java 17, Spring Boot, Spring Security, Spring Data JPA, and Thymeleaf, deployed live on Render.

- A secure, multi-user task manager with persistent login, session timeout, and single active-session enforcement.
- Redesigned the entire frontend into a Todoist-inspired, responsive UI with modal-based task creation and keyboard shortcuts, cutting task creation to **1 keystroke**.

ACHIEVEMENTS

• **Microsoft Azure WE-HACK**

January 2023

Led a team of three in the Microsoft Azure WE-HACK hackathon, securing a spot in the **Top 10** among **300+** participants through strong leadership and technical execution under time pressure.

• **Hack Celestia**

March 2023

Led a team of three in a national-level AI hackathon at university, placing **4th** among **650+** participating teams through applied AI development and technical leadership.
